AU BALES OFFERED		43,697	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																			
AU BALES SOLD		40,373	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWI

The buoyant sale room atmosphere continued with gusto at this week's Australian wool auctions. Local buyers were in the mood for purchasing, which placed nearly all prices on a firmly upward trajectory from the outset. The most well-sought-after commodity was the Merino wools from 19 to 22 microns which pushed 3% higher almost immediately as auctions commenced. The superfine Merino categories were by no means neglected, with a healthy 20ac clean/kg added whilst crossbred wool types and cardings traded fully firm to slightly dearer.

The initial reticence from customers to follow last week's strong price gains was somewhat dismissed this week as those overseas users in need of prompt supply committed to the new price levels. This turned out to be an opportune move as both the auction clean price levels and forex rates forced CIF (cost, insurance, and freight) prices up even further. Now that the auctions have closed for three weeks, those needing wool for new contracts will be wholly subject to the closing spot price from those exporters willing to go short or choosing to dispose of any greasy stocks held.

Local traders were largely responsible for the price gains over the past fortnight. The need to complete orders for July and August shipments, combined with some new business enquiry, resulted in a dearer market. As higher prices became available from users, exporters were given an opportunity to try and "average" the old (set) and new contract prices to minimise the projected losses on those out-of-the-money forwards written before the price rises.

The direct China top maker buyers were not eliminated from buyers' lists, but they certainly had to pay the higher prices set by traders to acquire supply to see them through the three-week sales recess. Looking from the outside in, those top makers are probably quite pleased with the current market, given the value added to their output of wool top production would be 5% higher than a week ago.

Wool auction sales are now in recess and will re-commence in the week starting Monday, 7th August 2023.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1656 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1460 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
