MARKET COMMENTARY

Less than 30,200 bales were offered this week making it the smallest national total for an October selling week in AWEX's history (since 1995).

The market opened very strongly from the outset and continued to strengthen as the week progressed. Again, it was the finer microns (18.5 micron and finer) leading the way with this sector of the market generally 45 to 50 cents dearer compared to the previous sale. The medium microns (20.0-22.5 microns) bucked the recent price trend and moved back into positive territory, gaining between 20 and 30 cents for the week. As we have seen in recent weeks there is almost a second tier market for any wools possessing CVH results of less than 45.

A small but very stylish selection of skirtings followed a similar trend to the fleece market. Most focus was on the finer edge of the selection, in particular 17.5 micron and finer skirtings were in some cases extreme. All other types and descriptions were generally 20 to 30 cents dearer compared to the previous week's sale. A very limited selection of locks and crutchings were generally 5 to 10 cents dearer. Stains very firm. Washing lambs irregular. While crossbreds saw 25.0 to 28.0 micron 15 to 20 cents easier compared to last week, with 30 micron generally 10 cents dearer.

Next week is a designated superfine sale with just over 36,000 bales rostered.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1385 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1256 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
