AU BALES OFFERED		29,621	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD		28,522																		
AU PASSED-IN%		3.7%	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.																	
AUD/USD		0.6521 0.2%

MARKET COMMENTARY Source: AWI

The wool market gained solid ground this week, with support evident across all micron categories as last week's momentum carried through into current sales. The Eastern Market Indicator (EMI) rose 39 cents to 1,458 AUD, while in US dollar terms it lifted 27 cents to 951 USD.

Fine wools continued their upward trajectory, with finer microns posting average gains of around 45 cents. The 19–22 micron range maintained its strong performance, adding an average of 53 cents. Crossbred types also edged higher, up around 5 cents, while cardings saw modest improvements, though they continue to attract less attention relative to other sectors.

Clearance rates improved week-on-week, reflecting renewed confidence in the auction rooms. Both buyers and sellers appear more optimistic as market sentiment strengthens, with prices finding consistent support across all three selling centres.

Year-to-date offerings remain around 5% lower than last year, reflecting a tightening supply environment even as offshore demand signals gradually improve. The October AWTA figures highlight this trend, showing an overall 9% reduction in wool across all microns. Medium types, particularly 19.5–24-micron wools, have seen the largest supply declines, while 15–18-micron wools have recorded year-on-year increases. These shifts continue to support prices for medium wools as the Australian wool clip gradually moves finer.

Ongoing uncertainty over delayed US economic data and the Washington budget impasse is weighing on the US dollar, which in turn is keeping AUD/USD supported and boosting returns for Australian wool. The upcoming release of the Australian October employment report is expected to be positive, potentially providing further support for the AUD.

This week points to the establishment of a new trading range. Last week's stabilisation, combined with this week's upward push, indicates a market responding to ongoing positive demand signals despite macroeconomic and policy uncertainties. How much the market will continue to test these conditions ahead of Christmas remains to be seen, but underlying supply and demand fundamentals look to be supportive of Australian wool prices.

Next week sees 33,457 bales offered with Sydney and Melbourne selling Tuesday/Wednesday and Fremantle selling Tuesday only.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1502 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1701 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
