MARKET COMMENTARY

The near record 12-day rally noted last week managed to add another day to the milestone before retreating on the final day of this week. The AWEX-NRI ended at 1269 cents, 4 cents lower than the previous sale after initially rising 3 cents before easing 7 cent on Thursday.

The market on the opening day was fairly flat, with some areas showing some promise and firming slightly, while other sectors, mainly the broader microns, eased back 5 cents. Thursday took a cue from the weak tone and fell 10 to 20 cents. The better types maintained reasonable support in the finer microns on the final day and were only marginally lower, however all other types and microns were as much as 20 cents cheaper.

Merino Skirtings, were also caught up in the pull-back and fell 10 to 20 cents on the final day, although the strong opening day reduced the losses for the week in this sector.

Despite the Merino sector losing some ground this week, the Crossbred market continued to find favour and managed increases to the tune of 5 to 10 cents. Merino Cardings also had a positive week, adding another 20 cents for the sale, although like the rest of the market they were flat on Thursday.

Whilst still low by long-term averages, the pass-in rate responded to the cheaper market and increased to 4.8% for the week, well above the historical low recorded last sale of 1.1%. Next week is now estimated at 42,500 bales, an increase of 24% on the forecast made a fortnight ago.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1217 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1189 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 14: Returns pr head for skirted fleece wool.

| Skirted FLC Weight | | Micron | | | | | | | | | | | | | | | | | |
