## MARKET COMMENTARY

Sales recommenced this week after the annual three-week Christmas recess to the largest sale in eight months.

The market initially opened up strongly on Tuesday which was rostered as a single-centre (Melbourne). There was a limited supply of Merino Fleece and these surged as much as 50 cents through the mid-microns, although 30 cents was more typical. The better types found good support but it was the lower spec types which carried the market higher as buyers sought to secure quantity at the limited offering. Sydney & Fremantle joined the action on Wednesday and followed the lead set on the preceding day. The medium & broader range of 20 to 22-microns was again the centre of attention. Melbourne was the true barometer on the day and generally held steady, although the support was unconvincing and a softening noted over the day. Thursday followed suit with a cheaper market although the margins were more substantial. The east coast was generally 15 cents lower while Fremantle was around 20 cents cheaper. Despite the falls late in the week the market still finished ahead with most of the Merino range around 20 cents higher than pre-Christmas levels. Merino Skirtings also closed 20 cents higher after making smaller rises earlier in the week but remaining firm towards the close. The largest offering of Crossbreds in 12 months struggled and mostly closed lower for the week. The volume microns of 27 to 30 microns were 15 to 20 cents cheaper for the sale. Merino Cardings firmed 20 cents, holding firm through to the close.

More than 60,000 bales are forecast next week; an offering of that size would make it the largest sale in 5 years.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1262 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1211 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
