Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

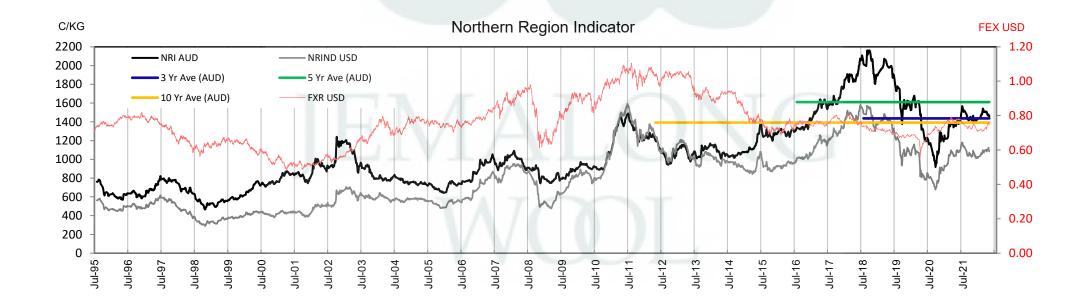

(week ending 13/04/2022)

MARKET COMMENTARY Source: AWEX

The market recorded another slight loss this week, continuing its downward trend. However, despite losing ground for the fifth consecutive week, there were positive movements within some sectors. 43,311 bales were on offer nationally (2,037 less than the previous week). Compared to the previous season, the total amount of bales offered continues to track higher, with 196,050 more bales put through the auction system (an increase of 15.4% compared to the same period last year).

This week saw different movements in the merino fleece types within regions. In Sydney and Fremantle, the individual MPGs ranged between fully firm and 25 cents cheaper. Melbourne, however, posted gains of between 3 and 61 cents. By the end of the series, the EMI had fallen 2-cents to close at 1,367.

Although the EMI has fallen over the past five weeks, the overall loss has not been significant; since Week 36, the EMI has dropped by 46 cents (an average of 9 cents per week). Next week there will be no sales due to the Easter recess, and sales will resume the following week (25th of April).

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

 Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1699 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1643 for 60% of the time, over the past ten years.
