AU BALES OFFERED		32,069		* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																				
AU BALES SOLD		30,229		* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

The market continued to climb slowly this week, recording gains on both selling days. A solid opening saw MPGs across the country gain 9-28 cents for 17 mic and stronger, resulting in a 9-cent rise for the EMI. Day two saw little change with Merino Fleece MPGs ranging between +2 and -3 cents in Melbourne & Fremantle, and +26 and -9 cents in Sydney, resulting in a 1-cent rise in the EMI, which closed the week at 1,142.

With only 33,633 bales on offer, the national offering continues to trend lower. Season-to-date there have been 575,656 bales offered at auction, 133,896 fewer bales than the previous season, representing a drop of 18.9%. This is the smallest season-to-date offering since the 2020/21 season, where only 526,889 bales were offered for the same period.

With a smaller season-to-date offering and minimal price movements, the value of wool sold is also well down with \$702 million worth sold at Auction season-to-date, which is \$158 million (18.4%) less than the same period last season.

Nationally, there are expected to be 39,616 bales on offer next week.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1612 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
