AU BALES OFFERED	37,065	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																		
AU BALES SOLD	36,585	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.																		
AU PASSED-IN%	1.3%

MARKET COMMENTARY Source: AWI

The first week of the 2026 calendar year delivered one of the strongest openings in recent history, with the Eastern Market Indicator (EMI) finishing 107 cents higher at 1,648 c/kg clean. This result places the EMI 38.5% above the same period last year, and at its highest level since 15th January 2020, when the EMI closed at 1,643 c/kg clean. The week also represents the strongest start to a calendar year since 2011.

Western sale room results were similarly positive, with the Western Market Indicator (WMI) closing at 1,846 c/kg clean, up 131 cents on the week. Gains were recorded across all sectors, with fine Merino wools ($\leq 19.0\mu\text{m}$) finishing 120–130 cents dearer, and medium Merino fleece (19.5–24.0 μm) showing the strongest improvement at 130–140 cents higher. Crossbred fleece gained 30–40 cents, while cardings improved 60–70 cents.

The Australian dollar was little changed against the US dollar this week, stabilising after recent declines and trading around US66 cents. The opening sale of 2026 confirmed a decisive shift in market sentiment, with buyer behaviour indicating urgency rather than caution following the seasonal recess. Competition was concentrated on well-prepared Merino fleece, particularly within the core 18–21 micron range, suggesting confidence in downstream demand rather than short-term opportunistic buying.

The scale of the price movement suggests buyers are actively raising limits to secure volume, rather than the market simply responding to reduced offerings. This week's results reflect a demand-driven adjustment supported by tight supply conditions. Next week's increased offering of 43,326 bales will test these renewed demand signals and determine whether current levels can be maintained as a firmer base. Next week, all three centres will sell on the Tues-Wed roster.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1503 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1710 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
