MARKET COMMENTARY Source: AWEX

The wool market performed in a more subdued manner this week and despite the slight increase in quantity, competition remained high. The main interest centred around wools with low mid break & CVH results (which are becoming increasingly difficult to quote, as some buyers adopt a “buy at best” attitude in the sale room). The opposite was true for the large volume of lots with high mid breaks, these lots were heavily discounted and played a significant role in the movement of the Micron Price Guides. Overall, the Northern Region Indicator (NRI) retraced 16 cents to close at 1893, however when viewed in USD terms it actually recorded an 11 cent rise to close at 1502.

The crossbred sector out-performed the merinos, with general price rises of 5-15 cents across the board. Buyer interest was again centred on the better prepared lines, earning these wools the greatest price increases.

The oddment sector was mixed, with the Eastern Markets gaining some ground while the Western region lost some. As a result the three carding indicators reducing by an average of 9 cents.

Quantities slightly reduce in Week 34, currently there are 41,815 bales rostered for sale in Sydney, Melbourne and Fremantle.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1621 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1347 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
