AU BALES OFFERED		40,472	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																				
AU BALES SOLD		36,617	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

The market fell again this series, although the downward slide was halted later in the week.

The market opened softly and by the end of the first day, losses in fine merino fleece types were the major factor in the overall market fall. The individual MPGs for 18.5 microns and finer fell by 15-59 cents, pushing the EMI down by 8 cents.

Day two was mixed, with buyer sentiment increasing as the day progressed. In the East, movements in the merino fleece MPGs ranged between plus 20 and minus 25 cents. While in the West (selling later), there were positive movements (of 4-16 cents) across the board. There was little change in the other sectors, so the overall movements were enough for the EMI to finally record an increase, albeit by the barest of margins (1 ac), resulting in the first gain in the EMI since the 9th of January.

The positive tone found late in the day carried into the final day, where the Southern MPGs (in the stand-alone Melbourne offering) mostly closed higher, with the only blemish being 21 microns, which conceded by one cent.

Strong interest in the oddment sector helped to push prices higher for the third consecutive series. Next week the quantity is expected to rise again. There are currently 44,049 bales rostered for sale nationally, with Melbourne again requiring three selling days.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1658 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1468 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
