AU BALES OFFERED		42,645	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD		38,823	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

After last weeks 31 cent loss, the NRI suffered more of the same, with a further 24 cent reduction this week. As is often the case in a falling market, buyers became more selective in their purchases, resulting in larger discounts for any impurities. Wools with very high mid-breaks (>75% in particular) were heavily discounted as buyers struggled to average them into their purchases. Inversely, any lots possessing mid-breaks of less than 40% attracted significant premiums and in some cases sold at levels very close to those achieved at the previous sale. In general terms 20 micron and finer lost 40 to 60 cents, while the broader microns were less affected with losses of 20-40 cents more common.

After being the only sector not to suffer corrections last week, the crossbreds market succumbed to the easing trend this week, with all types and descriptions across the entire spectrum recorded general losses of between 10 and 20 cents (with the poorly prepared lines suffering the greatest reductions).

Once again, the oddments continued their downward trend, losing ground for the fourth consecutive week. Prices were generally reduced by 10-30 cents, resulting in the three carding indicators falling by an average of 17 cents. Currently there are 38,849 bales rostered for next week's sale (nearly 9.0% less than this week).

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1741 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1362 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
