# JEMALONG WOOL BULLETIN

(week ending 15/06/2017)

#### MARKET COMMENTARY

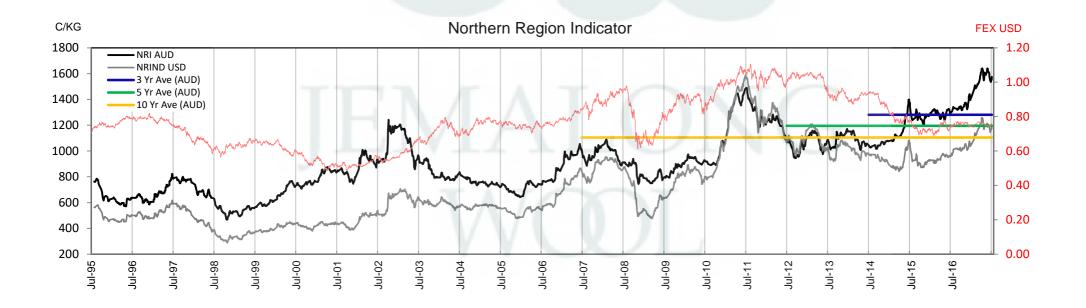

The positive tone set at the end of the previous sale was evident from the outset this week. The relatively small offering of 28,585 bales saw buyers having to fight hard to obtain market share, this combined with reports of new business having been written, provided the perfect conditions for a rising market.

The first selling day saw all types and descriptions rise (generally between 20-30 cents) pushing the NRI to 1551. The second selling day was a continuation of the first with prices opening 10-20 cents dearer, then increasing as the sale progressed. By the end of the sale prices were generally 30 to 50 cents dearer, leaving the NRI at 1575 (an increase of 30 cents for the week).

Wools broader than 21.0 micron were most affected by the rising market, so much so that the 22 MPG hit a record high. The skirting market also experienced rises but nowhere near the extent of the fleece (with buyers focusing on the lower VM and better spec lots). The crossbred market also continued its solid run with most types and descriptions generally 5-10 cents dearer.

Next week sees a drop in quantity to 24,376 bales, as Fremantle takes a weeks break.

#### Definitions:

- \* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- \* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

  Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1469 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1292 for 60% of the time, over the past ten years.
