## MARKET COMMENTARY

It was a mixed week in the Australian wool market this week with the finer microns experiencing strong gains whilst the broader edge lost ground. Less than 38,000 bales were offered nationally in three selling centres, a fairly typical total for this time of the year. A sharp fall in the exchange rate was a key aspect this week with the Australian dollar losing more than 2 cents compared to last week and trading at its lowest level in 2 months. The cheaper dollar helped propel the finer microns to increases of 10 to 20 cents, which in turn boosted the Northern Region Indicator by 10 cents for the series.

As with recent sales 19-microns and finer were most affected, particularly in the lower spec types where there were increases of 20 to 30 cents. The broader microns initially held firm before succumbing to weaker demand on Thursday and falling 10 to 20 cents. The Merino Skirting market mirrored the fleece market with a stylish selection of FNF skirtings (less than 2.0% vm) maintaining strong interest and making modest increases for the sale. Finer crossbred types (25/26 microns) continue to find favour on limited volumes, increasing another 10 to 20 cent this week. The broader crossbreds (30/31 microns) rebounded from last week's abrupt falls with restrained rises of 5 cents. Merino Carding types preserved their recent trend, making only slight movements over the two days.

week the national offering is currently rostered at almost 42,000 bales including a three-day series in Melbourne.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1360 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1246 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 8: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
