MARKET COMMENTARY

More than 55,000 bales were offered in the final sale of the 2016 calendar year. Unlike in recent weeks where the market has been subject to large price movements, this week saw steady increase in merino prices across all centres, while the crossbred market continued to drift lower.

After steady price rises throughout the sale, all merino sectors generally finished the week 10 to 20 cents above levels recorded in the previous sale. The skirting market performed better than the fleece in Sydney and Fremantle, on average 20 cents dearer for the week, while Melbourne was firm and unchanged compared to the previous week. It was the largest offering of Crossbreds in 2 years and 34% larger than last week. Prices drifted lower and poorly prepared lots in particular were neglected, then increasingly discounted as the sale progressed. Prices were generally discounted between 5 and 20 cents, with the coarser end least affected. The oddment market was one of small & mixed movements, leaving the Northern Merino Carding Indicators 7 cents cheaper.

The NRI finished the 2016 calendar year 122 cents higher (+9.5%) YOY at 1412 cents, the highest calendar year closing figure on record. Turnover for 2016 was just over 2.5 billion dollars (AUD), the largest amount since 2002 (when volumes were 62% higher). Average returns per bale of \$1478 this season, are the highest on the AWEX data base (which commenced in 1997). Sales resume week commencing 9th of January 2017.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1403 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1264 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
