Note

Definitions:

^{*} Due to the irregular market quoting for some fine wool categories, <u>figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts</u>
Report & other available information.

^{*} For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

^{* 10} Year data is not available for some micron categories, which may result in blank spaces in the table above.

^{*} A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price. The higher the percentile, the stronger the market.

(week ending 17/01/2013)

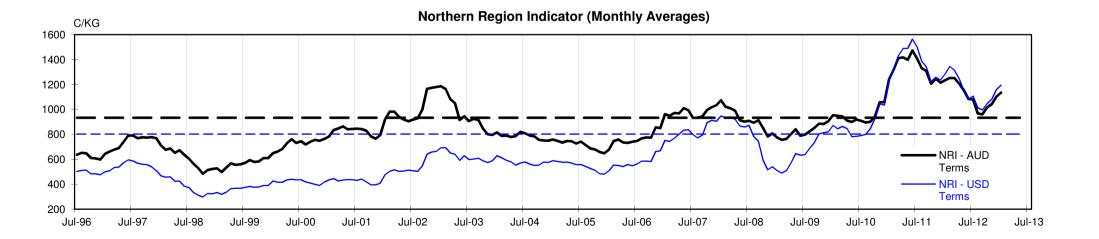

MARKET COMMENTARY

One Australian Dollar = 1.050450 US as of: 17/01/2013

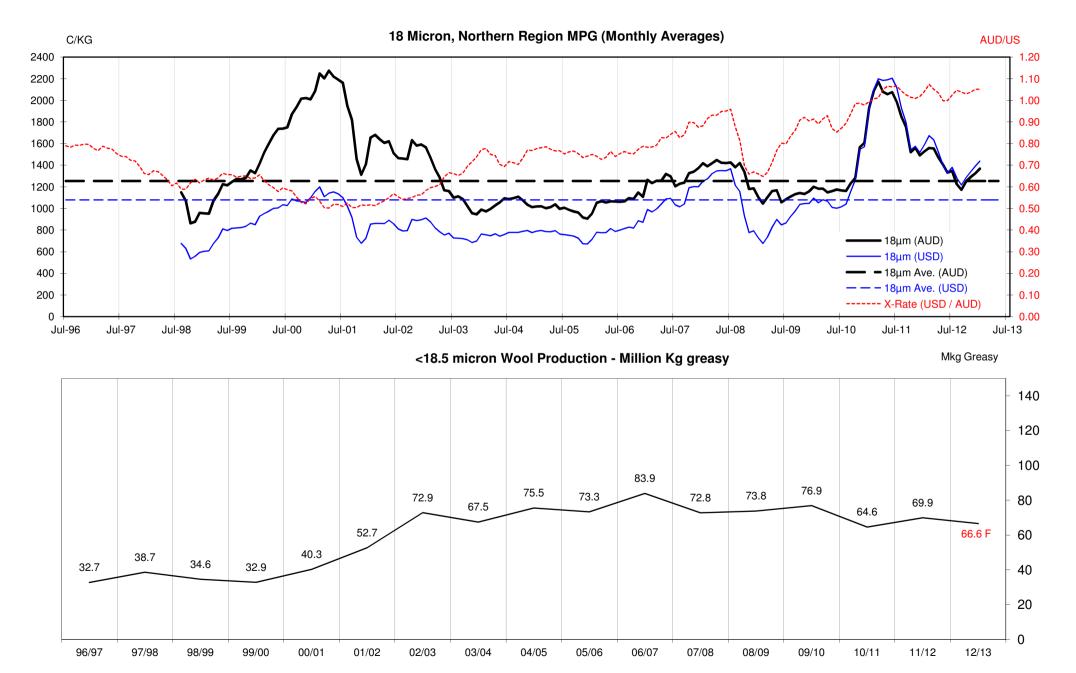

NORTHERN REGION – Sale Week 29/12 (60,414 bales offered nationally)

Wednesdays market was a little mixed with the finer end attracting strong buyer support (the better style & strength lots gained 30-40 cents, while the less stylish lots gained 10-20 cents), while the medium to broader microns lost 5-10 cents. Solid buyer pressure had all skirtings 20-30 cents dearer with the higher Vm lots (>5%) most affected. Oddments also pushed higher, with locks & crutchings 20 cents dearer while stains were 30 cents dearer. Crossbreds were also a little mixed, with 26 to 29 microns 5 cents dearer while 30 to 32 microns lost 5 cents. 2.5% PI

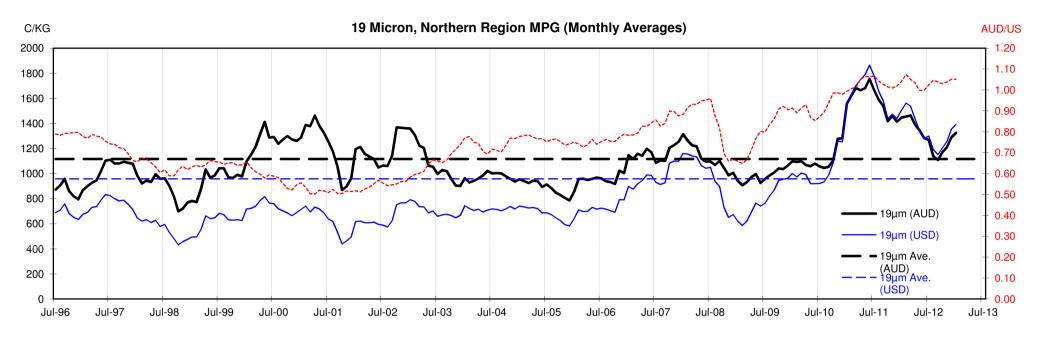

Thursdays market eased back when compared to Wednesdays more stylish selection. The finer microns attracted the most attention with prices generally only a few cents cheaper (16.5 remained firm on a limited offering). The 18.5 to 21 micron range came under pressure, with this range generally 15 cents cheaper. The broader end followed a similar pattern to the finer microns with a decrease of 5 cents on a limited selection. Low Vm skirtings (<3%vm) were irregular (with odd lots slightly cheaper), while the high Vm lots were tending 5-10 cents cheaper. Locks were 5-10 dearer, crutchings remained unchanged and crossbreds were firm. 7.3% PI.
