MARKET COMMENTARY

Week 33 on the Australian wool selling calendar was one of consolidation, there were no major rises or falls, just a good solid market over all three selling days. The Norther Market Indicator had a modest 3 cent rise to close at 1521 cents. The market was again led by the finer microns and 18.0 micron and finer was the only micron group to record significant rises, in this case generally 10 to 30 cents dearer. 18.5 to 19.5 micron were fully firm whilst a large selection of 20.0 micron and coarser eased slightly to finish the week 10 to 20 cents off last week's levels. Again buyers continue to favour the high nkt low cvh lots and these wools continue to attract healthy premiums compared to similar wools with less attractive test results.

The skirting market struggled slightly this week to maintain its previous levels, generally falling 10 to 20 cents with the finer better style types least affected. The oddment sector also had a very solid week with all three carding indicators rising by an average of 11 cents, most types and descriptions had small rises however the dwindling selection of washing lambs (0.3%) continue to attract very strong buyer interest and were extreme.

The crossbred sector continued its move back into positive territory this time with rises of between 10 and 20 cents with 28.0 micron most affected. **Buyers continue to favour the better prepared lines, with properly skirted wools enjoying the largest price gains.**

Next week sales resume in Sydney, Melbourne and Fremantle with currently nearly 47,000 bales rostered for sale.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1410 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1275 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
