MARKET COMMENTARY

As is often the case when the market closes pre-Easter on a positive note, it will continue the upward trend in opening. This was certainly the case this week, with the AWEX Northern Region Indicator rising 26 c/kg (+2.3%).

The market opened in Melbourne on Tuesday with an 11c rise in the local indicator. Sydney, Melbourne and Fremantle operated on Wednesday with local indicators rising 19, 8 and 26 cents respectively, while Thursday trading reflected consolidation in all centres, with each regional indicator rising about 4 cents.

Prices for Merino fleece improved across all sectors however 18-21.5 micron wool performed strongly with support across all types recording a weekly increase of between 2 and 3%. Similar price increases on Skirtings were recorded with lower VM skirtings sought after. Crossbred and carding wools recorded more modest increases over the week however demand in these sectors remained strong.

The lowest pass-in rate since August 2013, saw only 3.2% of the offering passed in, and as supply is expected to tighten over the remainder of the season, exporters are closely watching volumes on offer, with next week currently forecast at 46,426 bales.

The forward market was also active this week, with 42,500 clean kilos trading on Riemann over the past few days. Near month settlement for 21 microns traded up to 1185 c/kg.

Looking ahead. The market is expected to be positive for next 3-4 weeks, due to limited volumes in the pipeline and pending smaller sales, and while business has been done, further sales will be influenced by finance availability, as cash is still tight in China.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1294 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1185 for 60% of the time, over the past ten years.

Table 4: Riemann Forwards, latest trades as at: Last Date

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 12: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
