MARKET COMMENTARY

This week saw prices bounce back, breaking the downward trend of recent weeks. The NRI gained 8 cents to finish the at 1300 cents/kg. Fremantle resumed sales after a pause last week, but the totals in all three centres were reasonably low, making it the smallest three-centre offering in 10 months.

As with most recent offerings Stylish/good spec wools recorded the highest gains but this week saw the average/lower spec wools attract widespread buyer support to finish the week with solid gains. Gains were experienced across all micron ranges, with the fleece market closing generally 10/15 cents dearer when compared to last week's close. Prices for Merino skirtings followed the lead of the fleece market making solid gains. Low vegetable matter lots (<2.0%) were highly sought after and in some cases prices were extreme. Merino cardings were the only poor performers for the week drifting marginally, to close the week 5/10 cents easier when compared to last week. Carbonising locks were most affected finishing 10/15 cents cheaper.

Next week Fremantle has a one week recess which brings the national offering back down to a total of 24,000, the smallest offering in 12 months.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1291 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1231 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
