AU BALES OFFERED		35,357	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

**MARKET COMMENTARY** Source: AWI

Driven by strong demand for merino fleece, the market re-gained more ground in this series. Fremantle returned this week, bolstering the national offering. Nationally, there were 35,357 bales on offer, 4,260 more than the previous week.

Main buyer interest continued to focus on good style, low vegetable matter merino fleece lots. Strong demand in these types was the catalyst for the overall gains in the market. Across the country all merino MPGs recorded positive movement. As Fremantle did not enjoy the gains felt in the East last week, the most significant gains were recorded in the West, with WR MPGs rising by 70-125 cents.

Specialty non-mulesed types continue to be highly sought after by exporters, who are prepared to pay premiums of up to 250 cents above similar spec mulesed types. By the end of the series, the EMI had added 29 cents, closing the week at 1,467.

The price differential between merino & crossbred wool continues to grow, best highlighted by the 2,362-cent gap between 17 & 28 microns (which is the largest in 21 years).

30,810 bales are currently forecast for next week's sales.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1664 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
