AU BALES OFFERED		38,447	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																			
AU BALES SOLD		36,267	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

There were some very positive results at this week's auctions. Merino types of all descriptions gained 25-50 cents as increased buying pressure from China activated buying interest from all sectors. Almost all the subsequent market gains could be attributed to that export destination. Competition from India and Europe was apparent, but their buying success was far more limited than usual.

From the outset of selling on Tuesday, it was apparent that the cheaper trend of past weeks had subsided and stabilised rapidly. Just as swiftly, the Merino market hit greater heights, and prices escalated throughout selling. Unfortunately, the crossbred and carding wools were not included in the refreshed interest, but prices were not that adversely affected, with just a few cents lost on some sale lots.

Overnight Tuesday, the Australian dollar shot up 2.2% against the US dollar on the back of the US Commerce Department releasing data to show inflation cooling in the USA. This had a negative value attached to the US dollar value. After the announcement, the AUD v USD was well into the 0.65 bracket after being 0.635 during the Tuesday wool sales.

This extraordinary shift in the primary exchange rate used in wool export caused initial apprehension from Chinese buyers. However, reports quickly filtered through from traders during Wednesday selling that more wool was required and that higher prices were available and being absorbed by offshore interests. As a result, further rises of 5-10 cents were recorded, with some of the week's best prices being available towards the close of selling in Melbourne and Fremantle. Once again, Chinese indents forced the pace.

Under the strongest competition seen for some time from Chinese indents, traders were forced into paying the new buying level, even if above very recently written contracts.

43,000 bales are rostered for sale next week on Tuesday and Wednesday.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1658 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1464 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
