^{* 16.5} is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. *Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

(week ending 18/02/2022)

MARKET COMMENTARY Source: AWEX

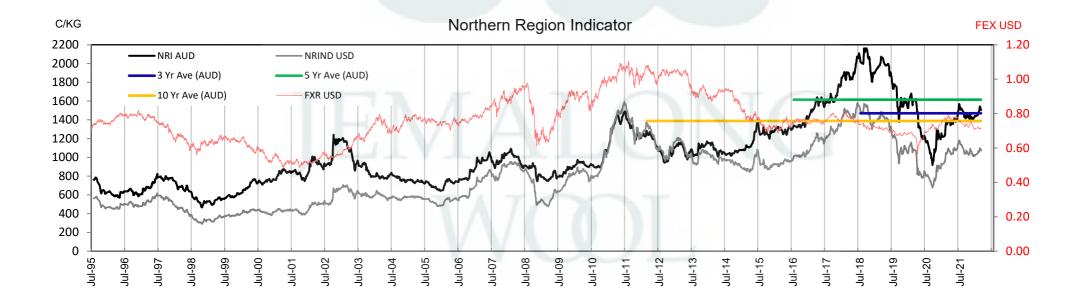

This week, the market performed admirably, recording a minimal overall reduction in a larger than usual offering. 48,990 bales were available to the trade (the largest offering since August).

Over 6000 bales of featured Tasmanian wool were offered in Melbourne, contributing to the abundance of stylish wool on offer. 48.5% of the national fleece selection was appraised as style 4 or better.

The market opened cautiously in Sydney and Melbourne, with buyers aware of the amount of wool yet to be offered. This cautious approach resulted in price decreases for the day. By the end of the first day, the MPGs for merino fleece in Sydney and Melbourne had fallen by 2-39 cents. In contrast, the Western region recorded gains of 5-11 cents, partially because their market closed well below the Eastern centres last week.

On day two of sales, buyer confidence increased noticeably, resulting in price increases in all three centres, with 21 microns and finer gaining 3-45 cents. Only Melbourne was in operation on the final day, where further overall price increases were recorded. As a result, the EMI added another 3 cents, closing the week at 1,420 cents, only 2 cents lower than the close of the previous series.

Next week national offering increases to 50,142 bales.

Definitions:

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years. In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1705 for 60% of the time, over the past three years. Example:

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1622 for 60% of the time, over the past ten years.

^{*} A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

^{*} Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
