MARKET COMMENTARY

With Fremantle now in its fortnightly selling programme, the national offering dipped below 24,000 bales this week, making it the smallest national offering for the year (which is not uncommon for the 2nd last sale of the season).

Over the course of the week, the NRI retreated 40 cents, with the Merino Fleece sector falling 50 to 60 cents. The medium to broader micron merino fleece sector was the most affected, and while the finer microns suffered sharp losses for the lower spec types, the more stylish/40nkt types found good support and any discounting for these types was limited. Also showing some positive signs was the 22/23-micron range in the Melbourne on the final day and whilst volumes were limited, prices remained in line with the previous day.

Merino Skirtings followed the fleece lower during the sale although the movements were not as large, closing 20 to 40 cents lower for the week. Crossbred types remained relatively calm when compared to the merino fleece catalogue, with only minor movements recorded. The Merino Carding Indicator (MCI) fell in both regions, its first weekly fall since early March.

The final sale for the 2014/15 season will be held next week with 48,849 bales currently forecast to for sale.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years:

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1219 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1194 for 60% of the time, over the past ten years.

Table 4: Riemann Forwards, latest trades as at: Last Date

Any highlighted in yellow are recent trades, trading since: Friday, 12 June 2015

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
