AU BALES OFFERED		15,800	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD		14,146	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.																	
AU PASSED-IN%		10.5%

**MARKET COMMENTARY** Source: AWEX

As Fremantle sat out of this week's sales, the offering reduced to just under 17,000 bales, which was further reduced when 7.2% of the offering was withdrawn, leaving only 15,800 bales on offer. It was the second smallest offering since AWEX records began 25 years ago, and was only slightly larger than the smallest volume, offered two weeks ago. However, with 10.5% passed-in, the clearance rate this week the lowest, with only 14,146 bales changing hands.

Once again, price reductions were driven by the continual discounting of lower yielding wools, as buyers struggled to average these types into their purchases. In contrast, the limited offering of higher yielding wools were highly sought after and as a result were least affected by the falling market. The individual MPGs fell by 11 to 71 cents, with 18 micron and broader the most affected.

Crossbreds also recorded falls this week, with the crossbred MPGs dropping by 18-24 cents. The only positive movement for the week, was the Southern Region carding indicator which managed to gain 7 cents for the series.

By the close the close of trade, the NRI had lost 33 cents, finishing the week at 1185 (its lowest level in five years).

Next week is the final sale of the 2019/20 season. Just over 30,000 bales are currently forecast for sale, with all three centres in operation.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 2143 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1571 for 60% of the time, over the past ten years.

# JEMALONG WOOL BULLETIN

(week ending 17/06/2020)

Page 10/27

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above '**Rise or Fall**' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The '**Monthly Price Movement**' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
