## MARKET COMMENTARY

The wool market opened on a strong note, hitting an all-time high on Wednesday at 1509 before easing back slightly to close the series at 1506 on Thursday.

The sale started off strongly in Melbourne on Tuesday with the finer microns outperforming the rest of the market jumping by 40 to 50 cents, however there were softening signals showing with the broader microns easing back slightly. Wednesday saw further strengthening when Sydney and Fremantle came into the mix and pushed the EMI to a record high, although Melbourne did lose some more ground in the broader microns.

By the end of the week the Northern and Southern region indicators had closed in positive territory, while the Western Indicator fell by 22 cents (on a predominately medium to broad offering) which continued to deteriorate as the sale progressed pushing some microns down by over 40 cents. The rise in price at the finer end of the spectrum and the falls in price at the medium to broader end have seen the price differentials stretch out to more traditional levels. Currently the gap between 18 and 21 microns is 453 cents (almost 200 cents above the average 10 year price differential).

The skirting market again mirrored the fleece market with the finer microns attracting excellent buyer support and recording increases in some types of over 100 cents while the medium to broad microns only just managed to just hold their ground.

The crossbred market continues to struggle compared to the merino sector, prices were 5 to 20 cents lower than last week, except 32 microns which were 40 cents lower and 28 micron which managed a small increase. All carding indicators rose this week, again pushing them into record territory in all centres.

Sales resume next week in Sydney, Melbourne and Fremantle with a reduced national offering of just over 47,000 bales.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1405 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1267 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
