## MARKET COMMENTARY

Anticipation of how central banks in Australia and the United States will set interest rates in the coming months seems to be putting downward pressure on the Australian dollar which fell again this week to close at 72.09 US cents. The currency, which has fallen 8% in the past month, appears to be a major factor affecting the Australian Wool market with the weaker currency keeping wool prices buoyant.

The fifth largest Merino Fleece offering for the season found good demand across most microns but it was the stylish lots with high NKT results which attracted the most support and as a result continued to sell at a premium. A noticeable increase in vegetable matter (VM) levels compared to this time last year has created significant demand for all low level VM types. Fleece lots with less than 1% VM are becoming increasingly sparse and as a result are selling at a premium to the higher VM lots.

Skirtings followed a similar trend to the fleece market with low VM lots keenly sought after. Shorter, high VM lots (up to 8%) enjoyed more robust competition as buyers struggled with the limited quantity of the longer low VM types, however very high VM (12%) types maintained their recent discounts. Best style crossbreds continue to reduce in number and the limited supply finished the week fully firm. Merino Cardings received significant buyer support on a limited offering rising around 10 cents for the week.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1288 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1226 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
