^{* 16.5} is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

(week ending 20/12/2024)

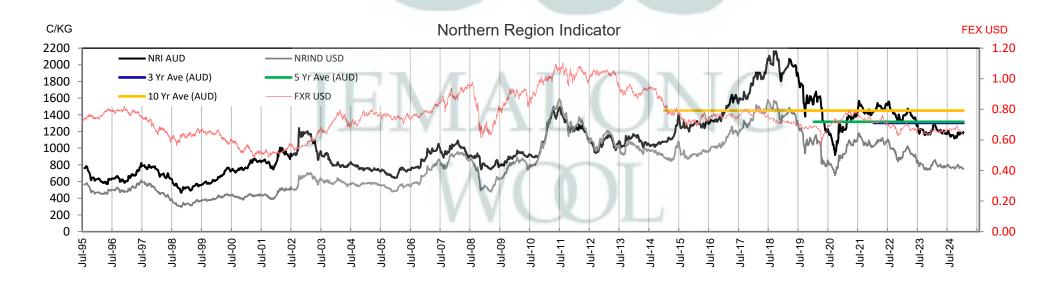

MARKET COMMENTARY Source: AWI

A positive close to Australian wool auctions prior to the three-week Christmas recess. In General, Merino prices appreciated by 20 to 30 ac/kg clean. Some container filling during the selling week resulted in some severe price spikes of up to 80ac on some individual lots.

Once again, there appeared to be just the right amount of wool fed into the market by sellers. The management of auction volumes, by brokers, has been commented on by exporters frequently during the first half of this current season, with the lower volume offerings helping to stabalise the market.

Auction activity this week was a replica of the past few weeks whereby the traders led purchasing lists upon opening with the first stage top makers and manufacturers sitting out till levels were established, then stepped up their pressure more towards the close of selling. Additionally, the AUD dropped against the USD by around 1%, which assisted the market.

Wool Auctions are now in a three-week recess. Sales will resume in the week commencing 13th January 2025, when all three selling centers will be in operation.

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years for 60% of the time, over the past three years.
 - In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1683 for 60% of the time, over the past ten years.
