AU BALES OFFERED			* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																		
AU BALES SOLD			* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

## MARKET COMMENTARY Source: AWI

Despite the lower prices in Australian dollar (AUD) terms this week, some better signals were flowing through to the trade. As the AUD continued its recovery against the major trading currencies, overseas users largely followed the US prices upwards and were prepared to pay the few extra US cents or Chinese yuan (CNY) per kg to stay in touch with the market.

Pre-sale show-floor talk amongst buyers centred around a larger forward availability of contracts (from almost predominantly China). Many new contracts had been reported but at an extremely sharp pricing basis (to the advantage of the overseas buyers). On top of the already committed business for the February and March delivery periods, this puts the market's immediate fortunes not just into the supply volume column, but also the wool-type make-up of that upcoming supply.

February is traditionally a high-volume supply month of super fine wools and this year has coincided with a very lacklustre demand scenario arising from the Italian markets. On top of this, dry/drought conditions in a few of our superfine growing regions has resulted in quality issues – mainly tensile strength- preventing some clips from taking their usual routes to processing in Italy. However, it was notable this week that the few best spinners clips on offer were receiving some large (200ac +) premiums from the luxury weavers of Italy.

The two largest Chinese top makers led the buying activity this week, with traders having to lift levels later in the week to compete. 41,000 bales are being offered next week on Tuesday and Wednesday in all three centres.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1539 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past ten years.

**Table 4: Riemann Forwards, as at: 19/02/25** Any highlighted in yellow are recent trades, trading since: Thursday, 13 February 2025

### Average Price of Australian Wool

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above **'Rise or Fall'** graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The **'Monthly Price Movement'** graph shows the extent of movement for each month, for the past 5 years.

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
