AU BALES OFFERED		41,857	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																			
AU BALES SOLD		37,300	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

On the back of solid increases in the fine merino fleece sector, the Northern Region Indicator rose 16 cents, to close the week at 1393.

Merino fleece generally gained 20-30 cents, with the finer microns benefiting the most. As the finer microns continue to increase at larger rates than the medium to broad microns, so too does the price differentials between microns. In the Northern Region, this is best highlighted by looking at the difference between 16.5 and 21 microns, where the difference has now grown to 1,170 cents, compared to 478 cents in the corresponding sale last season. Over the past year, 16.5 microns has gained almost 700 cents, while 21 microns are still trading at similar levels to this time last year, although they have regained 400 cents from their September low.

The crossbreds struggled again this week, recording overall losses for the third consecutive series, with 26 to 32 microns falling a further 1-18 cents.

Bales held over from last season are continuing to bolster auction volumes, with 41,857 bales offered this week compared to 21,101 in the corresponding sale last season. The larger volumes and higher clearance rates, has resulted in 20% more wool being sold at Auction Y.T.D, compared to the corresponding period last season.

47,028 bales are currently rostered for next week's sale.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1953 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1536 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
