Note:

* Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

* For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

* 10 Year data is not available for some micron catedgories, which may result in blank spaces in the table above.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price. The higher the percentile, the stronger the market.

MARKET COMMENTARY

One Australian Dollar = \$ 1.07 US, as of 20/04/2011

NORTHERN REGION - Sale Week 42/10 (50,355 bales offered nationally)

<u>On Tuesday</u> - Merino fleece lost ground with decreases in the order of 20-30 cents common. The 19 micron and finer end, saw best styles least affected (with odd lots dearer), however the lower styles displaying low specifications and some colour have suffered 40-60 cent discounts. 19.5 to 23 microns lost 20-30 cents, with the broader end most affected. Merino skirtings also lost around 25 cents with most styles and VM ranges affected. Lots containing heavy colour or hard cots have again been heavily discounted. Locks eased 20-25 cents, while stains lost 10 and crutchings were generally unchanged. Crossbreds also lost ground with a small selection of low style lots closing 15-30 cents cheaper.

<u>On Wednesday</u> - Prices reduced further, on the back of a lower style selection. While 19 micron and finer suffered the largest falls to close 20 cents lower, the few better style lots on offer continued to find good support, closing in line with the previous day. 20 & 21 microns also showed little change, while the small number of 22 & 23 micron lots fell 10 cents. Skirtings of best length and style were generally unchanged, however cotty types (particularly in the 8% to 15% Vm range) were heavily discounted. In the oddments, locks & crutchings remained unchanged, while stains were slightly dearer. Crossbreds were generally unchanged on a limited selection.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
