AU BALES OFFERED		27,169	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided. * Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

## MARKET COMMENTARY Source: AWEX

The wool market recorded a positive result this week, following four weeks of falls. A traditionally quiet time of year for shearing in many parts of the country, it's also generally a low volume period on the auction front. This week, there were a total of 27,169 bales on offer nationally, making it the smallest offering since June last year (Week 49), when only 26,897 bales were offered.

The smaller offering attracted widespread competition, pushing prices higher from the outset. The strongest demand was again for the higher-yielding lots, particularly those possessing favourable additional measurement (AM) results. With such a limited selection of these types, the lesser style and lower spec wools also benefited from the rising market. On the opening day, all the published MPGs across all three centres posted gains. Merino fleece MPGs added 5-54 cents, while the crossbred and skirting markets trended higher. The EMI added 10 cents for the day in AUD and 2 cents in USD terms.

On day two, the market again trended higher, with the EMI dearer in both AUD and USD terms (adding 4 and 3 cents respectively). The EMI finished the series 14 cents higher, closing at 1,203.

Next week, there are expected to be 28,346 bales on offer nationally.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1524 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
