## MARKET COMMENTARY

Week 51 saw Sydney and Melbourne offer 22,298 bales, the smallest national offering for the year and the smallest merino fleece offering in over 8 years. The first selling day saw buyers scrambling to secure their share of a very limited offering, all types and descriptions enjoyed general price rises of between 20-40 cents, pushing the NRI up a solid 15 cents to 1590 cents.

As buyers fought hard for quantity, even lesser style wools and wools with less favourable test results experienced similar gains to the better style and spec lots. The second day was similar to the first, although less extreme. Buyers continued to push for quantity albeit a little more selective, which resulted in further market increases of 10-20 cents. The NRI added a further 9 cents to close the week at 1599, an overall increase of 24 cents for the week.

The skirting offering was also the smallest for the year leaving all types and descriptions generally 20-30 cents dearer, again it was the lower vm lots and wools exhibiting favourable length and strength results that managed the largest gains. The crossbred market continues to improve, this week saw price increases of 5-10 cents, and again it was the better prepared lines that attracted the greatest buyer support. The oddment offering was also the smallest of the year, this resulted in the carding indicators rising by an average of 12 cents for the week.

Next week sees Fremantle resume sales, pushing the national quantity up to 36,993 bales.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1471 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1292 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
