MARKET COMMENTARY

Only a week ago Chinese enquiry was so quiet that further falls in the wool market were anticipated over the coming month. The short term outlook was somewhat bleak and new business was needed to arrest the downward trend. Fortunately by the end of the week there appeared to be a change in mood and from the commencement of this week exporters were reporting a much better tone.

With new business having been done and with a smaller offering than previously forecast, the market opened dearer and gained momentum as the sale progressed, although there was a slight pullback in Fremantle late on Thursday.

The Northern Region indicator gained 38 cents for the week, to close at 1236, while rises of 20 to 55 cents were common across the Micron Price Guides with 17 to 23 microns gaining around 50 cents while the broader end improved by 20 cents. With increased European interest, the superfine market continued to offer premiums for selected 'true-to-type' lots, and for those lots ticking all the box's (resulting in a low CVH test result) the premiums are quite significant and can exceed 200 c/kg clean. Merino cardings were not left out, picking up 12 cents.

While the best performers in the market in recent weeks have been the well specified super fines, the carding market continues to outperform all other sectors in a broader sense, with the MC indicator trading 36% above the same period last season, and 68% above the average of the past 10 years.

This week's rise was partially due an increase in European interest, as well as a 1.5% fall in exchange rate which aided those buying in US dollars. Anecdotal reports also suggest there may have been some changes to Chinese import quotas, with December licences being opened up for some mills?

Looking ahead, there is mixed sentiment about how next week's market will unfold. Some in the buying fraternity believe this week's rises will extend into next week while others believe the market will be unchanged or may even move back into buyers favour. The slight pull back in Fremantle late on Thursday may also indicate a settling of the market?

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1258 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1194 for 60% of the time, over the past ten years.

Table 4: Riemann Forwards, latest trades as at: Last Date

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 8: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
