## MARKET COMMENTARY

This weeks market saw the NRI rise 9 cents to hit a record high of 1530 c/kg.

The finer micron groups continued to appreciate at a faster rate than their broader cousins, causing the price differentials between microns to widen further. Quality continued to influence price this week, with the better types attracting strong support and maintaining their large premiums over the lower spec &/or poorly prepared types.

The heat did however dissipate somewhat from the skirting market, leaving this sector generally unchanged, with the exception of some better/finer lots which managed modest rises for the week.

The interest in the crossbred market continued this week with most types and descriptions adding a further 10 to 20 cents to the gains recorded last week. The oddment market also continued onward and upward with 20 to 30 cent rises recorded for locks and crutchings, while the quickly diminishing offering of washing lambs attracted extremely strong buyer attention.

Next weeks quantities are currently forecast at just over 42,000 bales nationally.

**Definitions:**

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

\* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

**Example:** In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1411 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1275 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
