MARKET COMMENTARY

The wool market recorded its 6th consecutive week (and 8 consecutive sale days) of price increases with sales in all three centres on Wednesday and Thursday. The AWEX Eastern Market Indicator (AWEX-NRI) rose a total of 20 c/kg this week with a clearance rate of 98.1%.

Sales on Wednesday were characterised by keen demand for Merino fleece across all microns resulting in increases of approximately 25 cents including types of lesser specification. Merino skirtings recorded similar percentage increases to that of fleece particularly in lower VM levels. Crossbreds recorded modest gains of approximately 5 cents. Demand for Lambs, Locks, Crutchings and Stains continues to be keen and were generally 10 to 15 cents dearer particularly well prepared lots.

Thursday sales consolidated or improved sellers favour upon Wednesday levels across most categories. The offerings this week contained slightly more wool from hold stocks than last week, though not significantly more. In recent weeks one noticeable trend is the increase in the price spread between the 18 and 22 AWEX Micron Price Guides to (now) between 160 and 170 cents. A range of this order was last observed in February 2013. This range has been steadily increasing since July 2014 from a narrow range of 20 to 30 cents. The USD/AUD exchange range has remained relatively static around the 77.5 cent level this week.

Sales next week will be a similar size to this week with 45,026 bales currently rostered.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1220 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1188 for 60% of the time, over the past ten years.

Table 4: Riemann Forwards, latest trades as at: Last Date

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 12: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
