Note:

* Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

* For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

* 10 Year data is not available for some micron categories, which may result in blank spaces in the table above.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price.

The higher the percentile, the stronger the market.

MARKET COMMENTARY

One Australian Dollar = 1.051747 US as of: 24/01/2013

NORTHERN REGION –Sale Week 30/12 (54,016 bales offered nationally)

Wednesdays market found support for the better style & strength finer types, although they were generally 10 cents cheaper. 19 microns did show some resilience, remaining unchanged, while the 21 micron area had the least support and contracted by 15 cents. Support was lacking in the skirtings, with all descriptions falling by around 20 cents, with the lower vm types less affected. All oddment categories were well supported, resulting in locks, stains & crutchings remaining fully firm. The crossbred market was a little mixed, with the finer microns easing 10 cents while the broader end (29+ microns) were firm and unchanged. 5.4% PI

Thursdays market saw buyers return halfway through the sale, lifting most microns from their soft start. The focus was 21 microns which recouped its early losses and closed 10 cents dearer, other microns struggled to re-coup all their losses, however did improve as the sale progressed. Merino skirtings were in line with the fleece market and after a hesitant start, most descriptions were in positive territory by the close (with the higher Vm lots most affected). Once again all locks, stains & crutchings closed unchanged as did the crossbreds for in the 27 to 30 micron range. 7.9% PI.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
