JEMALONG WOOL BULLETIN (week ending 24/10/2013)

MARKET COMMENTARY

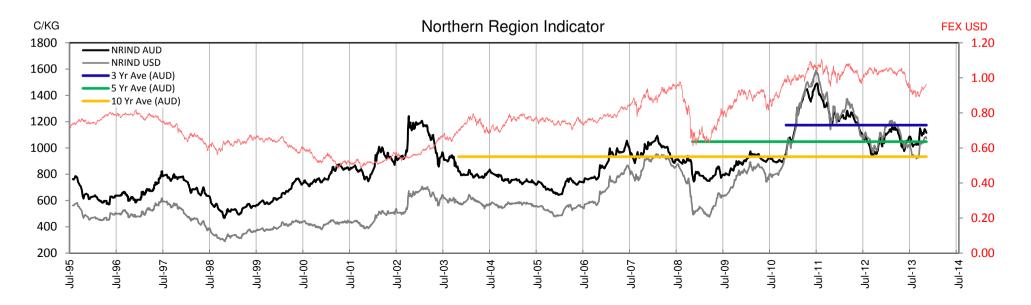

41,410 bales were offered for sale this week, with 35,653 bales sold, representing a passed-in rate of 13.9%.

Despite some positive signs towards the end of last week, the market was unable to maintain traction, with the Northern Region Indicator slipping a further 16 cents to close at 1115.

Wednesday's market saw merino fleece generally ease by 15 cents, with the finer microns 20-30 cents cheaper. Skirtings also lacked support, easing by 10-15 cents with the burrier lots most affected. In the oddments, crutchings remained unchanged, while locks shed 15 cents and stains eased by 10. Crossbreds also lost some ground, with 25-28 microns 10 cents cheaper while 29 microns and broader were 5 cents off the pace.

Thursday's market was irregular with only minor movements recorded across the micron price guides (MPG's). Merino fleece saw good support for the better style & strength types, however this was offset by heavy discounting for the lower Nkt & higher mid break lots. Skirtings continued to ease throughout the sale as support dwindled, with all descriptions closing 20 cents cheaper. On a more positive note, locks ended the day fully firm while stains & crutchings remained unchanged. Mixed results in the crossbreds saw 25-27 microns ease by 5-10 cents while 28-29 microns remained firm.

With the general market tone for this season remaining very strong, the current correction is believed to be temporary, however currency will play a part as to how the market unfolds in coming weeks.

<u>Decile Tables</u> are a useful tool for working out price targets.

<u>Percentiles</u> are a more accurate guide to where the market is currently trading (The higher the percentile, the stronger the market).

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 year <a href="Example: Example: "Example: "Examp

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1113 for 60% of the time, over the past ten years.

JEMALONG WOOL BULLETIN

(week ending 24/10/2013)

The above 'Rise or Fall' graph, shows how often the market has risen or fallen in a given month over the past 10 years, it does not show the extent of the movement only the frequency of direction. The 'Monthly Price Movement' graph shows the extent of movement for each month, for the past 5 years.

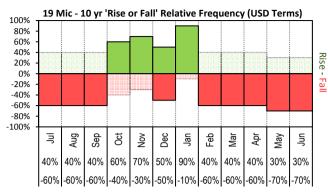

The above graph, shows how often the '12 month high & low' have been achieved for a given month over the past 10 years. It is not a measure of probability.
