MARKET COMMENTARY Source: AWEX

The price increases last week encouraged more sellers into the market, pushing the national offering higher, with 50,138 bales put before the trade.

From the outset, it was evident that buyers were not prepared to push prices higher, instead they were selective in their purchases, and by the end of the series, the individual MPGs for 20 micron and finer had dropped by 5-68 cents. However, when viewed in US dollars terms (which the majority of overseas orders are traded in) the NRI rose by 13 US cents, closing at 1,040 US cents, an increase of 1.2%.

Crossbreds were the only sector to record positive movements this series, with their MPGs adding 4-35 cents.

Similar volumes are forecast for next week's sale, with 50,535 bales currently rostered for sale.

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
 - Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

 Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 2101 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1536 for 60% of the time, over the past ten years.
