AU BALES OFFERED			* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																	
AU BALES SOLD			* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

With reports of overseas enquiry beginning to slow, as well shipping delays tying up buyer finances, the positive result at this week's Auctions was largely attributed to the foreign exchange advantage (with the AUD falling 2.9% against the greenback); and the significant reduction in wool on offer (after 13.6% was withdrawn prior to sale).

Main buyer interest this week, was for good style wools (MF5 and better), particularly those with favourable additional measurement results. These wools generally sold at levels 10-30 cents above those achieved in the previous series and were the impetus for the gains experienced in the individual MPGs. The MPGs across the country for 19.5 micron and finer gained between 5 and 42 cents. Lesser style wools (MF6/7) did not receive the same level of buyer support and were highly irregular/trending lower.

The skirtings tracked a similar path to the fleece, with prices generally gaining 10-20 cents, while the crossbred sector recorded minimal movements. The gains in the merino fleece MPGs, combined with gains in other sectors helped to push the NRI up by 14 cents, to close the week at 1356.

48,829 bales currently rostered for next week, in what will be the last sale before the Easter recess.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 2098 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1539 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
