MARKET COMMENTARY

Week 47 on the wool selling calendar has seen the market react with substantial corrections across the entire merino micron range. A national offering of just over 34,000 bales included over 10% of wool that had previously been offered for sale. The opening day of selling saw the Northern Region Indicator (NMI) lose 9 cents with falls of 15-20 cents in the medium micron ranges and up to 30 cents at the finer end.

Day two saw all types and descriptions suffer further price reductions with the NRI shedding a further 23 cents to close at 1580 (-32 for the week). Again it was the medium microns that were less affected with a reduction of up to 30 cents, however the finer end was hard it dropping back 50-60 cents.

The odd lot exhibiting excellent style with the right specs were not as badly affected but any wools that would normally only receive a small discount quickly lost buyer support. The skirting market headed in the same direction as the fleece, finer wools and lots carrying higher VM levels were hardest hit, in some cases dropping over 80 cents for the week. Many lots exhibiting only small impurity amounts were also heavily discounted as buyers looked for value in a falling market. A very limited selection of oddments saw keen competition among the carding buyers, enabling this sector to go against the trend and record small increases for the week, pushing the MC indicator up 4 cents. The crossbreds performed relatively well when compared to the merinos, strong competition was evident and most types and descriptions only eased by 5 to 10 cents.

The amount of wool coming onto the market continues to retract, currently just over 30,000 bales have been rostered for sale in Sydney, Melbourne and Fremantle.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1461 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1290 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
