MARKET COMMENTARY Source: AWEX

The wool market recorded a small overall rise this week. The increase was driven by rises in the merino fleece sector. There were a total of 28,960 bales available to the trade (3,299 fewer than in the previous series). When compared to the previous season, the national quantity is tracking higher. An additional 4,228 bales have been offered so far in the new season, an increase of 7.4%.

On the opening day, movements for the merino fleece MPG's in the Eastern centres ranged from -9 to +34 cents, with the market improving as the day progressed. Late selling Fremantle benefiting from the largest gains (rising 15-44 cents). The EMI added 4 cents for the day (13 cents in US dollar terms).

On day two, there was little change recorded in the merino fleece sector, with movements in their MPG's ranging from -29 to +15 cents, while the crossbred sector lost ground, with its MPG's losing 5-35 cents in the south. By the end of the day, the EMI had gained 1 cent, with weakness in the crossbred sector preventing a larger rise. The oddment market also performed weakly, with the three Merino Carding indicators falling by an average of 9 cents over the two days.

Next week, only Sydney and Melbourne are in operation; Fremantle does not hold a sale in Week 3 due to the very limited shearing in Western Australia in June. Currently, 21,646 bales are expected to be offered nationally.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1522 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1748 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 10: Returns pr head for skirted fleece wool.
