Note:

\* Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

\* For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

\* 10 Year data is not available for some micron catedgories, which may result in blank spaces in the table above.

Definitions:

\* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price. The higher the percentile, the stronger the market.

#### MARKET COMMENTARY

One Australian Dollar = \$ 1.05 US, as of 24/08/2011

NORTHERN REGION - Sale Week 8/11 (39,119 bales offered nationally)

<u>On Tuesday</u> - The market seemed to be finding a new level (following the substancial falls over the previous two weeks). Once again it was the FNF (<1% VM) types that attracted the most interest. Most micron categories closed within about 10 cents (either side) of where they opened. In the merino skirtings, the lower Vm types (<5%) gained support ending the day fully firm, however the burrier lots were robust from the out set, closing in sellers favour. In the oddments, locks fell 5-10 cents, crutchings were par to 5 cents cheaper while stains on a limited offering were unchanged. Crossbreds in general were up to 5 cents cheaper, however the broader end was slightly dearer with 32 microns <u>On Wednesday</u> - The finer micron MPG's closed 10-15 cents dearer, on the back of a more stylish selection (with the better style and strength lots upto 30 cents dearer). 19 & 19.5 microns remained unchainged, however 20 microns and broader were up to 5 cents easier (with the FNF types least affected). Skirtings remained solid from the start to finish firm across all descriptions, with the better length & style lots even posting some gains. Locks closed 5 cents dearer, crutchings remained firm while stains rose 10 cents. The crossbred market was also strong, with 28 to 32 microns gaining a further 5 cents. 14.0% PI

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
