AU BALES OFFERED		36,952	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																				
AU BALES SOLD		34,333	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

This week, the wool market recorded an overall increase, mainly driven by a strong lift in most merino fleece wool types. The national offering reduced to 37,725 bales; this was 3,823 fewer bales than were offered in the previous week. The reduced offering attracted strong competition from a large number of buyers; as a result, the prices achieved were above those achieved in the previous series. While the increases were felt across most good merino fleece types, the finer microns in the Eastern markets recorded the most significant gains.

The merino MPGs across the country recorded increases, with the only exception being 18 microns in the West, which posted a nominal 1 cent reduction, 18 microns and finer in the eastern states added 23-62 cents. These gains, combined with increases in the skirting and oddment markets, and minimal movements in the Crossbreds, helped the EMI post a 17 cent rise for the series, closing at 1,341 cents. The oddment market continues to perform strongly; general gains in locks, stains and crutchings of 10-20 cents pushed the regional Merino Carding Indicators up by an average of 14 cents.

Next week the national offering increases to 41,499 bales.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1750 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1595 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
