MARKET COMMENTARY

Due to Thursdays Australia Day Holiday, this weeks sales were held on Tuesday and Wednesday.

The market opened on Tuesday with a negative tone, leaving the NRI to close 20 cents cheaper at 1486. However Wednesdays market saw a completely different outlook with prices opening at the previous day's levels and in many cases lots started showing small but gradual increases, leaving the NRI 1 cent dearer by the close. Despite the relatively small correction, many growers were reluctant to accept the price offered, which was reflected in the above normal passed in rate of 13%.

As we have seen recently, style and spec played a large role in market movement, the better the type the lesser the falls. The skirting market again closely mirrored the fleece market with most falls experienced on the first day of selling, followed by consolidation and marginal increases on the second day (although, some low spec / high vm finer micron lots struggled to find support and were tending cheaper).

The crossbred market which has been struggling in recent weeks, suffered further losses and was in most cases 20 cents easier with the exception of 28 micron which only lost 5 cents for the week. The oddment sector also suffered losses but not to the same degree, although all centres showed losses for the week Sydney and Fremantle actually recorded gains on the second day of selling, setting a positive outlook for the upcoming sale.

Sales continue next week with currently 42,584 bales rostered for sale in Sydney, Melbourne and Fremantle.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1407 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1267 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
