AU BALES OFFERED		28,243	* 16.5 is the lowest Micron Price Guide (MPG) published by The Australian Wool Exchange (AWEX). Therefore MPG's below 16.5 micron are an estimate based on the best available information at the time of publication. Likewise, for any category where there is insufficient quantity offered to enable AWEX to quote, a quote will also be provided.																				
AU BALES SOLD		24,100	* Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorporating the existing 15 & 15.5 micron data, will be provided as a guide.

MARKET COMMENTARY Source: AWEX

In welcome news to both buyers and sellers, this week's wool market recorded general rises, following two weeks of solid losses.

As Fremantle did not require a sale, the national offering reduced to 28,243 bales (6,182 fewer bales than the previous series). The smaller than normal selection attracted strong buyer support, pushing prices higher. However, despite the improved levels, many sellers were unwilling to accept the prices offered (especially for out-of-spec or harder-to-place lots), resulting in a national Passed-In rate of 14.7%.

By the end of the series the MPGs in the north & south had risen by 1-89 cents. The largest gains were experienced in the finer microns in Melbourne, with 18.5 micron and finer rising by 52-89 cents. These rises helped to push the EMI up by 15 cents, to close the week at 1,350.

Merino skirtings followed a similar path to the fleece, with general gains of 20-40 cents, with the finer microns most affected. The crossbred sector recorded minimal change, with 26 to 32 microns all trading within 7 cents of the previous week. A small selection of oddments was the only sector of the market to record an overall loss for the series, albeit a minimal one, with the merino carding indicators dropping by an average of 4 cents.

Fremantle returns to the fold next week, bolstering the forecast national offering to 40,554.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1810 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1546 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
