U

JEMALONG WOOL BULLETIN

(week ending 25/11/2020)

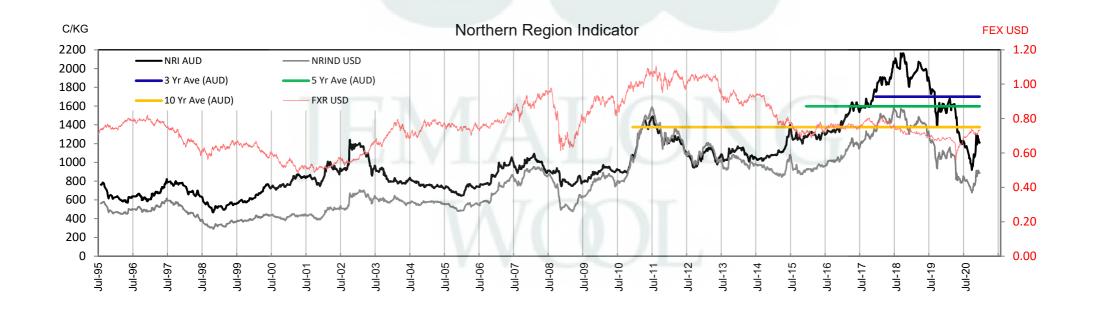

MARKET COMMENTARY Source: AWEX

This week's market steadied, with minimal price movements felt across most merino types and descriptions. The NRI gained 3 cents in US dollar terms, however in local currency terms it was 5 cents easier for the week, closing at 1,209.

Main buyer interest focussed on the better style wools and those with favourable additional measurements (in particular wools with a low CVH), these types were well supported and recorded very little change for the series. In contrast, the lower style, lower yielding wools and those with poor additional measurements (in particular those with a high CVH) did not garner the same support and were highly irregular, tending cheaper. These wools accounted for the majority of the of fleece wools that were passed-in and also were a large factor in the overall negative movements in the some of the individual Micron Price Guides (MPGs).

The crossbred sector did not attract the same level of support as the merinos, pushing prices down. The MPGs for 26 to 28 micron were reduced by 15-40 cents, contributing to the overall fall in the EMI.

Next week's national offering increases, with 41,822 bales currently rostered.

(week ending 25/11/2020)

Definitions:

- * A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
 - Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- * Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years. In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 2143 for 60% of the time, over the past three years. Example:

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1572 for 60% of the time, over the past ten years.
