<sup>\*</sup> Recording of 15 & 15.5 micron commenced in October 2017, and as a result some historic data is not yet available for those MPG's. Where historic data is not available an estimate based on '16 micron statistics' and incorperating the existing 15 & 15.5 micron data, will be provided as a guide.

(week ending 26/02/2025)

#### MARKET COMMENTARY Source: AWEX

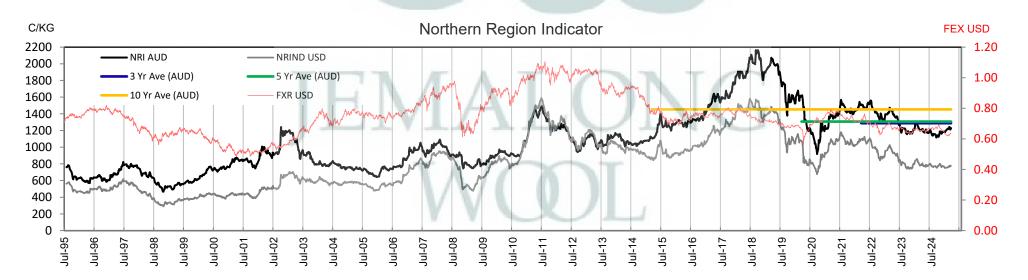

After two successive weeks of falls, the market recorded an overall increase this series. The positive tone that was evident on the final selling day last week, carried forward, resulting in widespread competition that lifted prices across all merino fleece types and descriptions.

39,972 bales were on offer, with Sydney holding a designated Superfine sale. On the first day of selling the MPGs gained up to 25 cents, with only 16.5-micron in the South resisting the trend by falling 11 cents. Day two was almost a carbon copy of the previous day, with rises of up to 28 cents recorded for Merino fleece MPGs.

The skirting market had a volatile week, recording general losses on day one, before bouncing back on day two, to close the week generally unchanged. The oddment sector had a solid week, with prices generally at or above the previous series.

The EMI gained 11 cents for the week, closing at 1,195. Minimal currency movement meant the EMI also rose in US dollar terms, by adding 2 US cents to close at 756 US.

Next week the national offering is expected to fall. There are currently 34,697 bales on offer.

#### Definitions:

- \* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.
- Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.
- \* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.
- The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1537 for 60% of the time, over the past three years. Example:
  - In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1684 for 60% of the time, over the past ten years.
