MARKET COMMENTARY

Sales resumed this week after the annual Easter recess with 52,189 bales offered.

The first day saw buyer confidence leave the market and all types and descriptions suffered corrections, generally between 10 and 40 cents. The NRI fell 11 cents to close the day at 1,597. However towards the end of the day, buyer confidence slowly returned with a noticeable rise in the western market, which continued into day to leaving the NRI 6 cents dearer to close the week at 1597.

All types and descriptions regained some of the previous day's losses although generally the entire micron range recorded net falls for the week of between 5 and 30 cents. The skirting market again closely mirrored the fleece, on the first day prices generally fell 20 to 40 cents with higher vm lots (>4%) most affected. The second day saw prices rebound on average 10 to 20 cents with FNF (<2%) enjoying the largest gains. The crossbred market had a solid week compared to the merino sector with all crossbred types trading within 5 cents of levels achieved at the previous sale. The oddment market also had a mixed week. Prices dropping on the first day only to recover some of the losses on the second, Sydney and Fremantle carding indicators recorded small gains for the week while Melbourne posted a 1 cent drop.

Next week sees a reduction in quantity with just under 41,000 bales being offered Nationally.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1445 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1286 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
