#### Note

#### Definitions:

<sup>\*</sup> Due to the irregular market quoting for some fine wool categories, figures shown relating to micron categories below 18 micron are an estimate based on the AWEX Premium & Discounts Report & other available information.

<sup>\*</sup> For any category, where there is insufficient quantity offered to enable AWEX to quote, a quote will be provided based on the best available information.

<sup>\* 10</sup> Year data is not available for some micron categories, which may result in blank spaces in the table above.

<sup>\*</sup> A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown in the table above, detail the period of time during the past 3 & 10 years that the market has traded either at or below its current price. The higher the percentile, the stronger the market.

27/06/2013

### NORTHERN REGION –Sale Week 52/12 (37,628 bales offered nationally)

This week's market saw 37,628 bales offered for sale nationally, with 13.1% Passed-In. The NRI closed the week 23 cents cheaper at 1059, however it managed to stay just above the 12 month average of 1057.

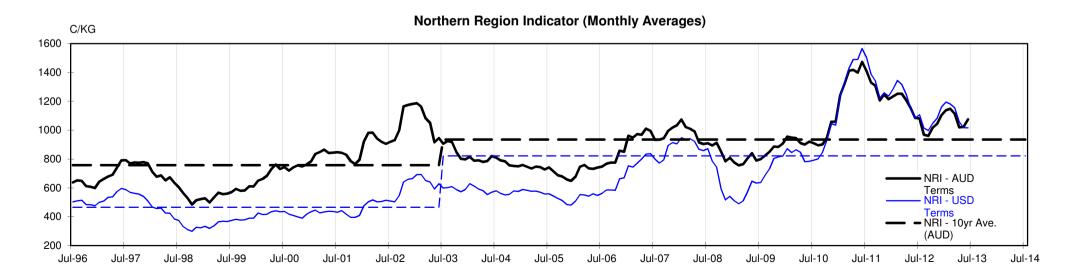

Following a late fall last week, this week's market opened on Wednesday generally 20-30 cents cheaper, although the finer microns were more resilient with only minor movements recorded. On Thursday the market reversed the previous day's trend, with the medium and broader microns steady while the finer end contracted 10-30 cents.

In a very rare event, the 22 MPG closed the week 11 cents above the 19 MPG. The last time 22 microns eclipsed 19 microns (in price) was in 2003, during the market pull back following the SARS outbreak in China.

With carding buyers in a "short-position", this end of the market pushed further ahead to close 12 cents dearer. Cardings are by far the strongest performer in the market at the moment with the three year percentile for merino cardings at 98%. The merino carding indicator has only traded above the current level on 4 occasions in the past three years, with the highest price achieved during that time, only 2 cents above the current price of 829).

While the overall outlook for the wool market is still positive, this week's correction can be attributed to a culmination of factors. While a lower AUD is beneficial to our market, in the short term the volatility is unnerving for our overseas customers, resulting in non-urgent orders being temporarily withheld. Also in the lead up to end of season, some exporters will have limited their purchases in an effort to balance their books, before rolling over the next round of finance. The absence of major buyer Viterra, over the past month could also be playing a part. Despite other exporters confident they can fill the void, it is reasonable to expect that it could take time for them to adjust their finances and pick-up the slack (especially at this end of the season).

There are only two more weeks of sale before the three week July recess. AuctionsPlus will be running a sale in week 5, effectively reducing the recess to two weeks.
