MARKET COMMENTARY

The AWEX-NRI maintained its sixteen-month high this week closing at 1375, a level that has only been exceeded on three selling days in past 5 years (each of which occurred in June 2015, when the NRI peaked at 1399).

A significantly larger offering than the previous week, saw over 45,000 bales put before the trade (the second largest for the season). A New Zealand catalogue opened proceedings on Tuesday, selling in isolation out of Melbourne, and as with the previous NZ catalogue stylish/40nkt types were well supported whilst the few broader types (20/21 microns) lost ground. The Australian component followed suit over the next two days with only minor adjustments to the quotes. Again Best and Spinners styles received strong competition and recorded solid premiums over other types throughout the finer microns. A number of Micron Price Guides in the finer microns (<19) maintained their recent price levels at, or near 5-year highs. While any odd pockets of weakness was limited to losses of <10 cents.

Merino Skirtings were similarly well supported in the finer microns, particularly best broken types which were up to 20 cents dearer. Crossbreds had another soft week, losing as much as 20 cents clean for most microns. While Merino Cardings went against the trend with the MC indicator in all three centres rising on average 22 cents for the week.

Next week's offering extends to over 49,000 bales with sales in Melbourne, Sydney and Fremantle.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1387 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1257 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 9: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
