MARKET COMMENTARY

With a national public holiday on Tuesday, Week 31 sales were conducted on Wednesday and Thursday only.

A total of 45,434 bales were offered for the week, and while the market gained some ground in US dollar terms it was not enough to counteract the rise in the AUD. As a result the NRI lost 14 cents to close at 1312. By the close of trade 13.5% of the offering had been passed-in with seller resistance more evident in the merino fleece sector where over 17% of the offering remained unsold.

Wednesday's market resulted in an easing of 5-10 cents for merino fleece with the lower spec lots most affected (recording falls of up to 20c/kg). Fleece finer than 18.5 with better specifications were least affected easing only slightly. Merino skirtings fell 10 cents. 28 micron crossbreds were generally 5 cents cheaper, while Locks were unchanged in Sydney & Melbourne.

Sales on Thursday saw a continuation of the trends set on Wednesday. Merino fleece fell 15 cents with lower spec lots recording greater falls. Merino Skirtings were generally 10 cents lower as were crossbreds & oddments.

Over 47,000 bales are rostered for sale next week in what is designated as an Australian Superfine Sale.

Definitions:

* A Percentile, is a value on a scale of one hundred that indicates the percent of a distribution that is equal to or below it. In general a percentile between 25% and 75% is considered normal, a percentile below 25% is considered below normal and a percentile above 75% is considered above normal.

Three and ten year percentiles shown on the bottom line of table 2 & 3 (above) and in table 1 (on page 1), detail the amount of time during the past 3 & 10 years where the market has traded either at or below its current price.

* Deciles are a method of sorting ranked data into 10 equal groups. The data may be ranked from largest to smallest or vice versa.

The above Decile tables sort price Percentiles into 10 equal groups (in ascending order), with table 2 ranking the previous 3 years prices, while table 3 ranks prices over the previous 10 years.

Example: In Table 2, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1264 for 60% of the time, over the past three years.

In Table 3, a Decile Rank of 6 for 19 microns, shows 19 microns have traded at or below 1212 for 60% of the time, over the past ten years.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

Table 8: Returns pr head for skirted fleece wool.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.

The above shows estimated returns per head for skirted fleece wool. These figures do not take into account the value of skirtings and oddments and do not take into account discounts that may apply for faults under individual circumstances. These figures are based on a market index of 100% and should be used as a guide only. Returns over \$30 / head for fleece wool are highlighted.
